About Us

DLP is a specialist consultancy here to help you achieve your information security and privacy objectives.

We assist organisations with projects involving DSP Toolkit, ISO 27001, Cyber Essentials, GDPR, PCI, Cyber Security, and Data Protection.

Over the years, DLP consultants have completed many successful projects for a wide range of clients including, government clients, NHS departments, pharmaceutical manufacturers, financial clients and numerous others.

With a deep understanding of InfoSec and data protection our consultants will work with you assessing your level of compliance, and then provide appropriate guidance and support to move the project forward.

How we can help you

Service Definition

DLP penetration testing services use skilled specialists utilising ethical hacking techniques to discover and fix information security vulnerabilities and issues that put the organisation's network and IT infrastructure at risk. Our CREST certified staff can undertake a wide range of testing services tailored to the exact needs of our clients.

Process

Our assignments typically run on the following lines:

- Sign a confidentiality agreement (either clients or ours)
- Sign a Pen Testing permissions agreement
- Organise a meeting with the project sponsor so that we can develop an understanding of the client's organisation and the penetration testing project
- Agree on the scope of work
- Identify which client operations staff will be nominated as contacts during the testing
- Determine staff and network/application availability and agree on a testing schedule
- Conduct penetration testing
- Write the report including the findings and recommendations
- Hold debrief meeting with the client to discuss findings and recommendation

Features & Benefits

Features

- ✓ Penetration Testing projects are run by highly experienced CREST qualified testing staff
- ✓ Utilise industry standard methodologies including CREST, OSSTMM and OWASP
- ✓ Identification of vulnerabilities found and how they can be mitigated
- ✓ Risks to the business are graded and communicated in plain english

- ✓ A wide range of post assignment technical support is available to help with mitigation and risk reduction
- ✓ Boost security defences to reduce the risk of attack
- ✓ Demonstrate good cyber hygiene by minimising potential attack vectors
- ✓ Meet customer and compliance standard testing obligations

Case Studies

Case 1

DLP consultants managed the information security function of a London based European Union (EU) agency for over 5 years.

The DLP team provided onsite support and guidance on a wide range of information security issues including attending inter-country EU meetings and providing input to discussions with various international agencies and NGO's.

Case 3

Assisting a NHS department with several aspects of their IG Toolkit submission.

Project included the selection and evaluation of several security vendor products to meet client requirements.

Case 2

Major bank reviewing their information security controls and their alignment with ISO 27001.

The project involved a review of documentation and related processes to determine gaps and potential areas for better alignment with the ISO 27001 standard.

Case 4

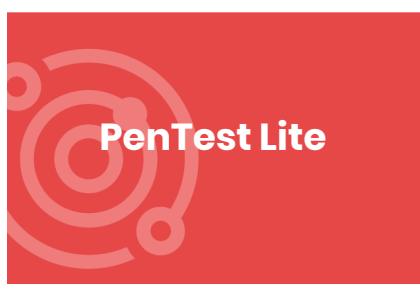

Healthcare diagnostic company requiring help and assistance to make their DSP Toolkit submission.

Project included the establishment of a governance programme aligned with the DSP standards utilising a Governance, Risk and Compliance system to automate many of the routine compliance tasks.
